Comprehensive safety on the cassette roof:

The Layher Rope Safety Gear

According to German regulations BGV C 22 (formerly VBG 37), equipment to prevent falls by personnel must be provided for work areas and walkways on roofs where the height of the fall is more than 3.0 m.

- ▶ Rope safety system developed specially for the Layher cassette roof incl. gripper (runner);
- ▶ Use in connection with safety harness and securing rope;
- ▶ Quick and easy to attach and move using the connections of the roof cassettes;
- ▶ Incl. fall arrester and rope tensioning units;
- ▶ Rope guide in ridge area, otherwise only every 15 m;
- ▶ Rope guides with gripper can be driven over, gripper can be suspended from any point and freely moved without detaching it;
- ▶ Corresponds to EN 795 Class C, both individual components and the overall system type-tested in conjunction with the Layher cassette roof.

All dimensions and weights are for guidance only.
Subject to technical modifications.

Sales exclusively on the basis of our currently valid
general terms of business.
